# Subject Index

Agglomeration
and segregation of type C powders from homogeneously aerated type A–C powder mixtures during fluidization, 155
Approximate calculation
of specific fracture energies for grinding, 145

Beds
cross-flow moving solid velocity in, 105
Bubble parameters
in gas-fluidized beds, effect of pressure on, 217
Breakage
investigation of kinetics of, as a first step towards assessment of economics of ultra-fine grinding of a British low-rank coal, 137
Breakthrough pressure
and pore structure, determination of, in random sphere packings, 11

CAT scan characterization
of sedimentation and floccs, 73
Circulating fluidized bed
model for, 155
Collar-type magnetic valve
for small-size solids (MVS), design concepts for: theory and experiments, 1
Control of quality of fluidization
in a tall bed using variance of pressure fluctuations, 237

Dense-phase transport
vertical plug flow in, 273
Density distribution
of particles in freeboard of a fluidized bed, 179
Design concepts
for a collar-type magnetic valve for small-size solids (MVS): theory and experiments, 1
Dynamic simulation
of a shallow-jetting fluidized-bed coal combustor, 247

Effect of pressure
on bubble parameters in gas-fluidized beds, 217
Effect of sedimentation feed flux on solids flux curve, 113
Electrostatic effects
on entrainment from a fluidized bed, 55
Explicit relationship to predict spherical particle terminal velocity, 127

Fine particles
residence time in a jetting fluidized bed, study of, 169
Floccs
and sedimentation, CAT scan characterization of, 73
Fluidization
segregation and agglomeration of type C powders from homogeneously aerated type A–C powder mixtures during, 163
in a tall bed, control of quality of, using variance of pressure fluctuations, 237
Fluidized beds
circulating, model for, 155
density distribution of particles in freeboard of, 179
electrostatic effects on entrainment from, 55
gas-, effect of pressure on bubble parameters in, 217
gas-, strongly segregated
mixing segregation kinetics in, 31
gas–liquid–solid, under high gas hold-up conditions, hydrodynamics of, 285
gas–solid, variable thickness two-dimensional bed for investigating hydrodynamics of, 91
heat transfer from, to immersed fine wires, 195
high-temperature, heat transfer in freeboard of, 187
jetting, study of fine particles residence time in, 169
shallow jetting, pressure drop across, 79
Fluidized-bed coal combustor
dynamic simulation of, 247
Fluidized-bed feeder
mass flow determination from pressure drop across fluidized solids in, 131
Fluidized-bed reactor
lateral non-uniformities of solids and gas concentrations in, 205
Fluidized solids
in a fluidized-bed feeder
slow determination from pressure drop, 131
Fracture energies for grinding
specific, approximate calculation of, 145
Freeboard heat transfer
in high-temperature fluidized beds, 187
Freeboard of fluidized bed
particle density distribution in, 179

Gas–liquid–solid
fluidization under high gas hold-up conditions, hydrodynamics of, 285
Granulation
of an insoluble powder in a spouted bed, 97
Grinding
calculation of specific fracture energies for, 145
ultra-fine, of a British low-rank coal, investigation of kinetics of breakage as a first step towards assessment of economics of, 137

Heat transfer
from fluidized beds to immersed fine wires, 195

© Elsevier Sequoia/Printed in The Netherlands

in freeboard of high-temperature fluidized beds, 187
High-temperature fluidized beds
freeboard heat transfer in, 187
Hydrodynamics of gas–liquid–solid fluidization
under high gas hold-up conditions, 285

Investigation of kinetics of breakage
as a first step towards assessment of economics of ultra-fine grinding of a British low-rank coal, 137

Jetting fluidized bed
study of fine particles residence time in a, 169

Kinetics of breakage
investigation of, as a first step towards assessment of economics of ultra-fine grinding of a British low-rank coal, 137
of mixing segregation in a strongly segregated gas-fluidized bed, 31

Lateral non-uniformities of solids and gas concentrations
in fluidized-bed reactors, 205
Limitation of simplex-centroid design
for porosity calculation of ternary mixtures, 69

Magnetic valve
collar-type for small-size solids (MVS), design concepts for: theory and experiments, 1
Mass flow determination
from pressure drop across fluidized solids in a fluidized-bed feeder, 131
Mercury intrusion measurements
particle size analysis via, 23
Mercury porosimetry
in random sphere packings: breakthrough pressure and pore structure determination, 11
Mixing segregation kinetics
in a strongly segregated gas-fluidized bed, 31
Mixtures
ternary, limitations of simplex-centroid design for porosity calculation of, 69
Model for circulating fluidized bed, 155

Nuclear magnetic resonance
spin-lattice relaxation measurements, rapid surface area determination via, 39

Optical beam attenuations in powder pipe flow
theoretical predictions of, 121

Packings
random sphere: breakthrough pressure and pore structure determination, 11
Particle density distribution
in freeboard of a fluidized bed, 179
Particle size analysis
via mercury intrusion measurements, 23
Pore structure
and breakthrough pressure, determination of, in random sphere packings, 11
Porosity calculation of ternary mixtures
limitations of simplex-centroid design for, 69
Powder bed
uniaxially pre-consolidated, shear properties of; non-uniformity of shear stress acting on shear plane, 49
Powder pipe flow
theoretical predictions of optical beam attenuation in, 121
Powders
insoluble, in a spouted bed, granulation of, 97
type C from aerated type A–C powder mixtures during fluidization, 163
Prediction of solids circulation patterns
in a spouted bed, 257
Pressure
effect of, on bubble parameters in gas-fluidized beds, 217
Pressure drop
across fluidized solids in a fluidized-bed feeder mass flow determination from, 131
across shallow fluidized beds: theory and experiment, 79
Pressure fluctuations
control of quality of fluidization in a tall bed using variance of, 237

Rapid surface area determination
via NMR spin-lattice relaxation measurements, 39
Residence time
of fine particles in a jetting fluidized bed, study of, 169

Sedimentation
and floccs, CAT scan characterization of, 73
Sedimentation feed flux
effect of, on solids flux curve, 113
Segregation
and agglomeration of type C powders from homogeneously aerated type A–C powder mixtures during fluidization, 163
kinetics of mixing in a strongly segregated gas-fluidized bed, 31
Shear properties
of uniaxially pre-consolidated powder bed — non-uniformity of shear stress acting on shear plane, 49
Simplex-centroid design
for porosity calculation of ternary mixtures, limitations of, 69
Simulation
dynamic, of a shallow-jetting fluidized-bed coal combustor, 247
Solid velocity
in cross-flow moving beds, 105
Solids circulation patterns
in a spouted bed, prediction of, 257
Solids flux curve
effect of sedimentation feed flux on, 113
Spherical particle terminal velocity
explicit relationship to predict, 127
Spouted bed
granulation of insoluble powder in, 97
prediction of solids circulation patterns in, 257
Study of fine particles residence time in a jetting fluidized bed, 169

Surface area determination
rapid, via NMR spin-lattice relaxation measurements, 39

Theoretical predictions of optical beam attenuations in powder pipe flow, 121

Variable-thickness two-dimensional bed
for investigating gas–solid fluidized bed hydrodynamics, 91
Velocity
terminal, of spherical particles, explicit relationship to predict, 127
Vertical plug flow
in dense-phase transport, 273
